Xenford Internet Private Limited
xenford.com | hitardha@xenford.com

BidBlitz

Brief:

An Auction platform to run penny bidding for both digital and physical products. Auctions should with micro second level accuracy. Whoever bids last will be the active bidder. It should support, dynamic timer.

Tech stack:

- Firebase authentication
- Firebase Apphosting (Webapp, preferred to be reactjs / typescript)
- Firestore (DB)
- Cloud Storage
- Cloud Messaging
- Cloud Functions (preferred to be node.js or python, to be used by both webapp & mobile app)
- Firebase AppCheck
- Flutter (Android/IOS app development)

Visual Requirements:

- Fully responsive design for both webapp and mobileapp
- Four side padding to be added so everything is visible and accessible
- Scrolling to be enabled wherever required.
- Footer should be at the bottom of the screen in webapp, even if content is less.

MileStones:

1. Admin portal Webapp
    a. Development
    b. Deployment
    c. Testing and code handover
2. Users Mobile App
    a. Development
    b. Build for Android / IOS
    c. Testing and code handover
3. Documentation & Support
    a. Admin Guide
    b. Deployment Guide
    c. Testing Report
    d. 90 Days Unconditional Support with unlimited Revisions.

Web App Requirements:

Admin APP:

- Landing Page : Simple page with Branding in header, an Image Slider in the body, Links to download Android and IOS apps. With footer having multiple links like Aboutus, Terms & Conditions, Privacy policy etc. (check Zomato.com) with proper SEO and title.
- Admin Login Page: A hidden link to access Admin page. The Page contains “username”, “password” based authentication mechanism. I reCAPTCHA should be there to check. User name, encrypted password, other details will be stored in firestore DB.
- Post login Layout: The left menu with operators elements, Header menu with Special elements for superadmins. Body contains everything needed and a footer. Reference image is attached.
- Page Accessibility: Each Page accessibility should be controlled by attributes. Every Admin user will have tags. Those tags can be used to control their access to specific page.
    - Ex:- New auction page should be accessible only by moderators OR auction masters. Then the logic should examine Is the user super admin ? is the user tag contains moderator ? is the user tag contains “auction masters” Any of this conditions satisfy then the user should be allowed to access the page. A Super admin can access every page by default.
- Dashboard Page: As per the layout A dashboard page will be displayed after successful login. This page contains about Total number users. New Users in Last 7 Days. No of active Auctions, No of Active Orders. Etc.
- Elements in the portal and their pages are listed below.
    - **Users**
        - Attributes
            - userID (autogenerated in firebase)
            - Name as per Aadhaar
            - Alias (Displayname) should be unique.
            - DoB as per Aadhaar
            - Gender
            - Last 6 digits of Aadhaar
            - Email
            - User photo
            - Signup date
            - Lastlogin date
            - Pincode
            - City
            - State
            - Country
            - Address
            - User Status (active / inactive – Default is Free)
            - Credits Purchased
            - Credits Spent
            - Wallet Balance (Bonus + Prchased – Spent)
            - No of auctions participated

        - No of auctions won
        - Userlevel
        - Subscription status (Free / Paid – defaults is Free)
        - Tags (comma separated values, default NULL)
    - Pages
        - List users page
        - User details page
        - Modify user page.
        - Navigation:- Menu-> List users page -> User Details -> Modify user
- **Categories**
    - Attributes
        - categoryID (unique, autogenerated)
        - Category Name
        - Category image
        - Parent Category (select from existing categories or NULL) – Primary categories have NULL in Parent category, Secondary categories have primary category as Parent Category
        - No of Items
        - tags
    - Pages
        - List categories page
        - New Category Page
        - Modify Category Page
        - Navigation:- Menu -> list categories -> New Category | Modify Category
- **Items**
    - Attributes
        - itemID (unique, autogenerated)
        - item name
        - item type (physical / digital)
        - Description
        - Item Images (multiple, maximum of 5)
        - Category
        - Qty
        - MRP
        - Tax
        - Shipping cost
        - Brand
        - Tags (comma separated values, default is Brand)
        - status
    - Pages
        - List items page
        - New item Page
        - Item details page
        - Modify item Page

        - Navigation:- Menu -> list items -> New item | item details -> modify item
- **Auctions**
    - Attributes
        - AuctionID (unique, autogenerated)
        - Auction Name
        - itemID (to be selected from existing items)
        - Launch Date & time (Date & time when it will be displayed in userapp and accept joinings)
        - Start Date & time (Date & time when the auction will be live to accept bids)
        - Auction type (Price / Discount)
        - Start Value (starting value of the bid)
        - Bid interval (number – in minutes)
        - Bid shift (floating number ex:- 0.1)
        - Paddle fee (to join the auction)
        - Penalty (for late joining after the auction becomes live – if value is 0 then joining after live is not allowed)
        - No of compliment bids

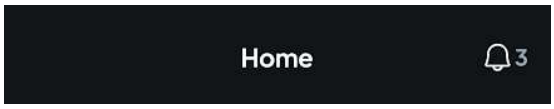
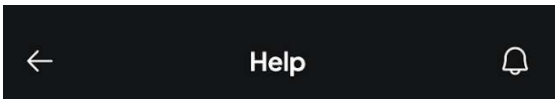
4. TrendingHoursLimit = 48 (no of hours in which the trending needs to be calculated)
5. NewTimeLimit = 24 (no of hours to consider an auction to be new)
6. HighValueLimit = 10000 (Item MRP should be above this value to be consider high Value)
7. FeaturedON = yes /no (to enable featured on home screen)
8. TrendingON = yes / no (to enable trending on home screen)
9. HighValueON = yes / no (to enable highvalue on home screen)
10. Searchrsults per page = 10 (no of results to be displayed per page, more results to enable multi page navigation)
11. Signup Bonus credits = 100 (no of credits each user gets when signup for the first time)

- More number of site settings can be added as per the webapp and mobile app requirements
- Each bid transaction to be stored inside the auction data with the following details
  - Time stamp
  - Timer (when clicked)
  - userID

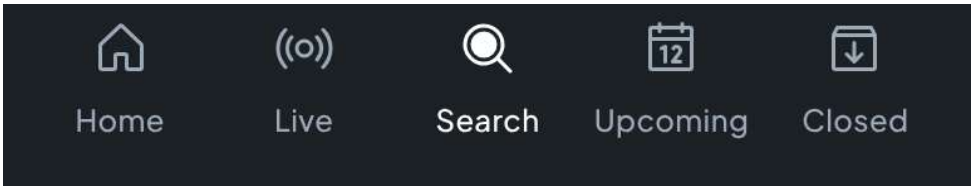
Mobile APP requirements (Android & IOS)

- Should be generated for both Android & IOS using flutter
- Visual experience and navigation should be similar in both the apps.
- Should be compatible with all types of screens. With responsive design
- App should take permissions to contacts, messages and storage.
- Every Page should have page title (at center) and notification icon with number dot (right top corner) and back icon (top left corner) except on home screen

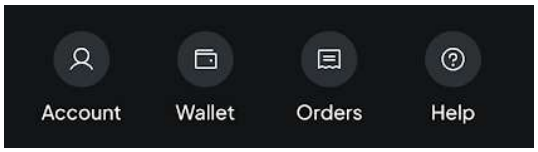




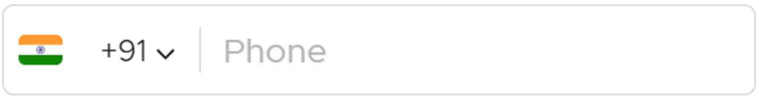
- Bottom Navigation bar should have Home, Live, Search, Upcoming and Closed, while highlighting the selected one. Follow the same icons



- Top Menu, Should have “My Account” , “Wallet” , “My Orders” and “Help”. One must login to access top menu items.



- By Having site setting in admin portal I should be able to hide Top Menu on all the pages except Home screen. Home screen should always have the Top Menu.
- Home Screen should have Auctions (upcoming & Live) listed in four categories which can be enabled and disabled using site settings.
  - Featured, selected By Admin
  - New (Created in last specific hours – hours defined in site settings)
  - Trending (Auctions with more joiners in last specific hours – defined in settings)
  - High Value (Auctions with items having MRP more than value – defined in site settings)
  - Each list should show only 4 items
- Login screen should prompt for mobile number with prefix of country code represented by country flag. Login page must include reCAPTCHA.

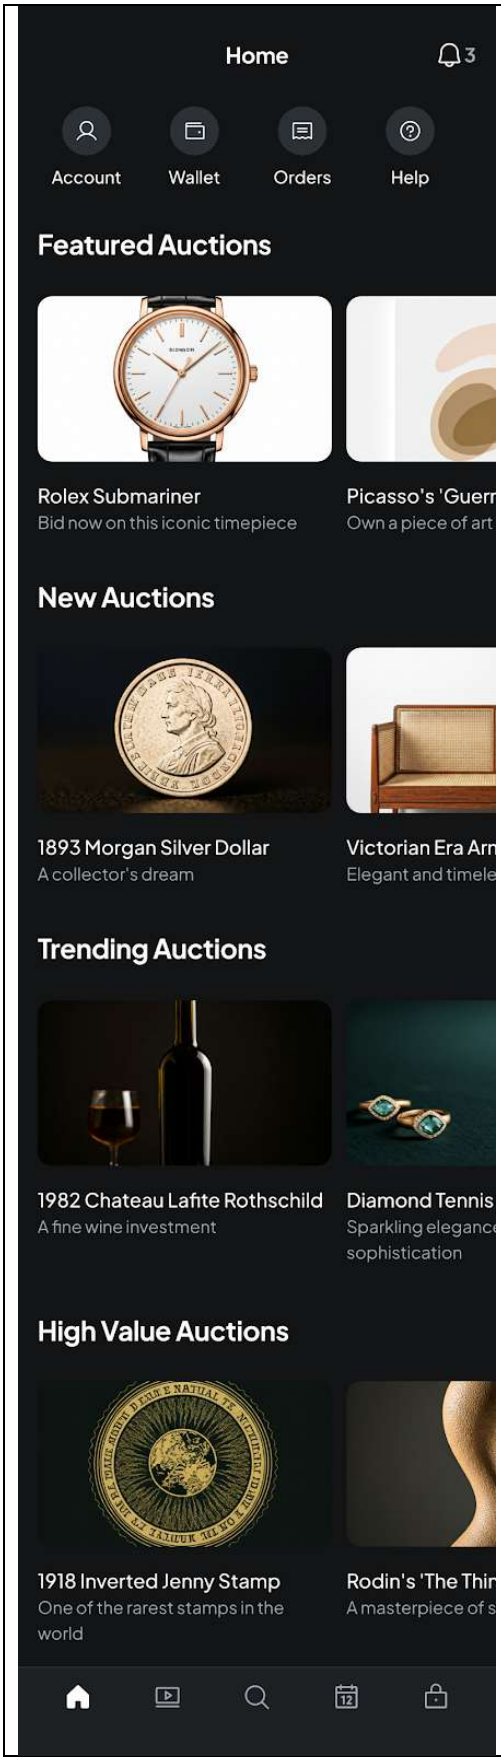


- Login screen leads to OTP verification screen and then Home screen after successful login
- Live auctions page
  - Pre login behaviour
    - List all the live auctions without any independent auction buttons.
    - A floating button at the bottom of screen with label “Signin to Bid”, by clicking leads to login screen
  - Post login behaviour
    - List auctions with two classifications “My Auctions”, “Other Auctions”. If there are no auctions in “My Auctions” then no classification needed.
    - My Auctions – The Auctions I have already joined by paying the paddle fee
      - Each bid item should display Auction Name, Item images, current bid value, current bid owner, no of bid chances I have, timer, “Bid Now” button
    - Other Auctions – Remaining Auctions.
      - Each Bid item should display Auction Name, item images, current bid value, current bid owner, joining fee (paddle fee + penalty), timer and “Join Now” button
      - Joining fee and Join Now button should be displayed only when penalty is not “zero”.
    - Each time user bids, no of chances to be reduced
- Upcoming auctions page
  - Pre login behaviour
    - List all the upcoming auctions without any independent auction buttons.
    - A floating button at the bottom of screen with label “Signin to Bid”, by clicking leads to login screen
  - Post login behaviour
    - List auctions with two classifications “My Auctions”, “Other Auctions”. If there are no auctions in “My Auctions” then no classification needed.
    - My Auctions – The Auctions I have already joined by paying the paddle fee
      - Each bid item should display Auction Name, Item images, MRP, Paddle fee, complimentary bids, extra bid fee (if not zero) and timer.
    - Other Auctions – Remaining Auctions.
      - Each Bid item should display Auction Name, item images, MRP, paddle fee, complimentary bids, extra bid fee (if not zero), timer and “Join Now” button
      - When ever user joins the auction credits must be deducted from wallet.
- Closed auctions page
  - Pre login behaviour
    - List all the closed auctions without any independent auction buttons.
    - A floating button at the bottom of screen with label “Signin to explore”, by clicking leads to login screen
  - Post login behaviour
    - List auctions with two classifications “My Auctions”, “Other Auctions”. If there are no auctions in “My Auctions” then no classification needed.
    - My Auctions – The Auctions I have WON

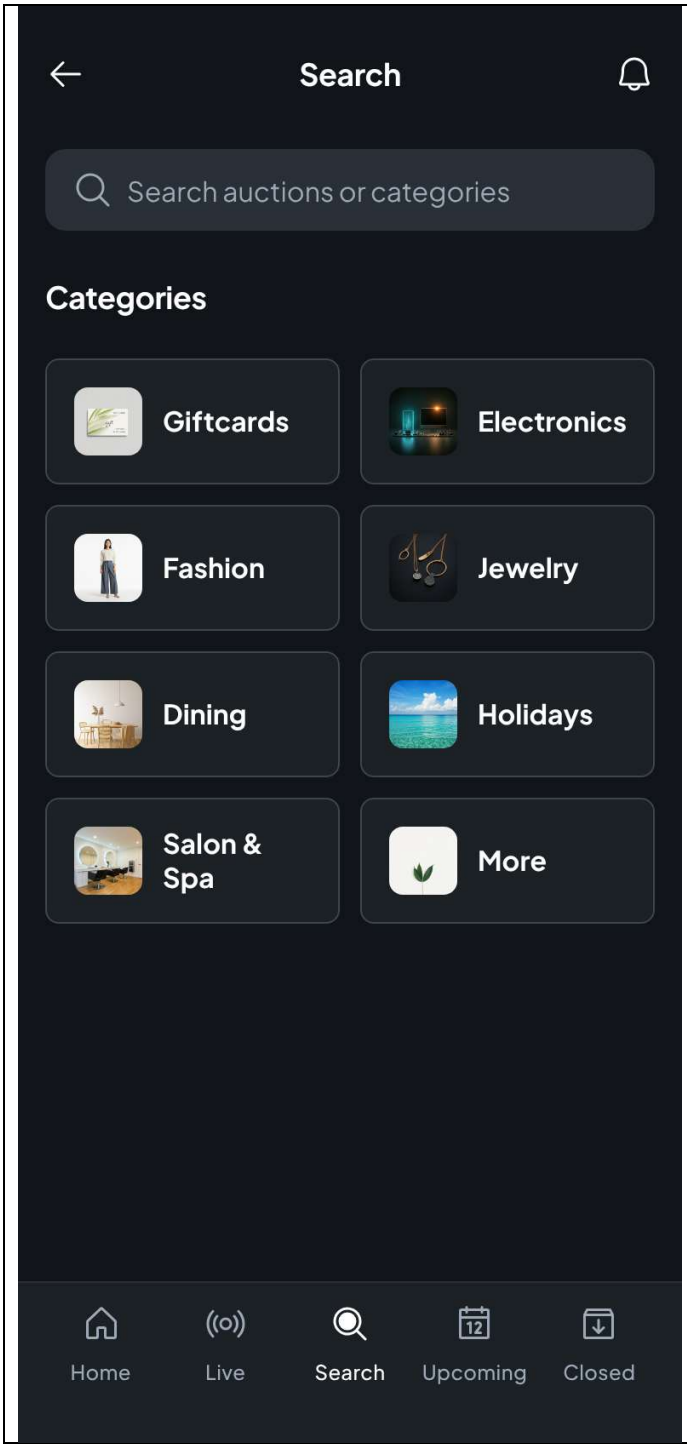
- Each bid item should display Auction Name, Item images, MRP, Final bid value, “Buy Now” button
- Buy Now should be allowed from specified hours from the closing time. (hours will be defined in site settings)

- Other Auctions – Remaining Auctions.
  - Each Bid item should display Auction Name, item images, MRP, final bid value, won by, and “explore” button
  - The Auctions participated by the user should be listed first (timestamp sorting after that)

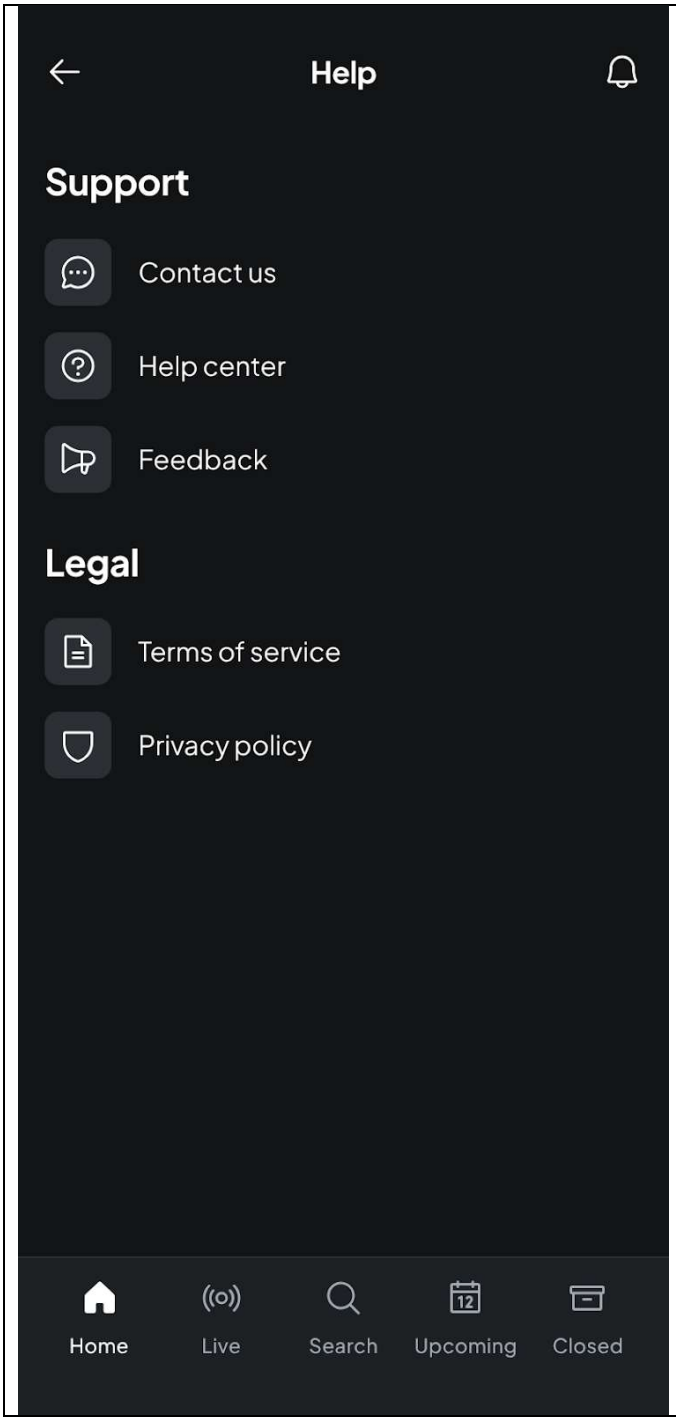
- Buy now screen – Should have item name, item images, MRP(crossed), auction price, tax, shipping, total cost and then checkout button.
- Coupon code should be available only when buying outside the auction. Like buying credits.
- Checkout button leads to payment gateway
- Search Screen – Should be able to search whole text of auctions, while item categories are listed below. When category selected, list all the auctions associated with items belongs to that category
- While listing auctions, or search results it should support multipage navigation.
- Clicking on Auction name, at any screen , should leads to display the complete details of auction clicked. Along with button.
  - Button should have different actions based on the following scenario.
    - Login – if user not logged in
    - Bid Now – If the auction is live and user already joined
    - Join Now – If the auction is live but user not joined in but allowed with penalty
    - Join Now – If the auction is upcoming and user not joined in
    - Back – If the auction is closed
    - Back – If the auction is live but new joining not allowed
- Clicking on Item Image, at any screen should leads to display the complete details of the item clicked. Along with a back button
-



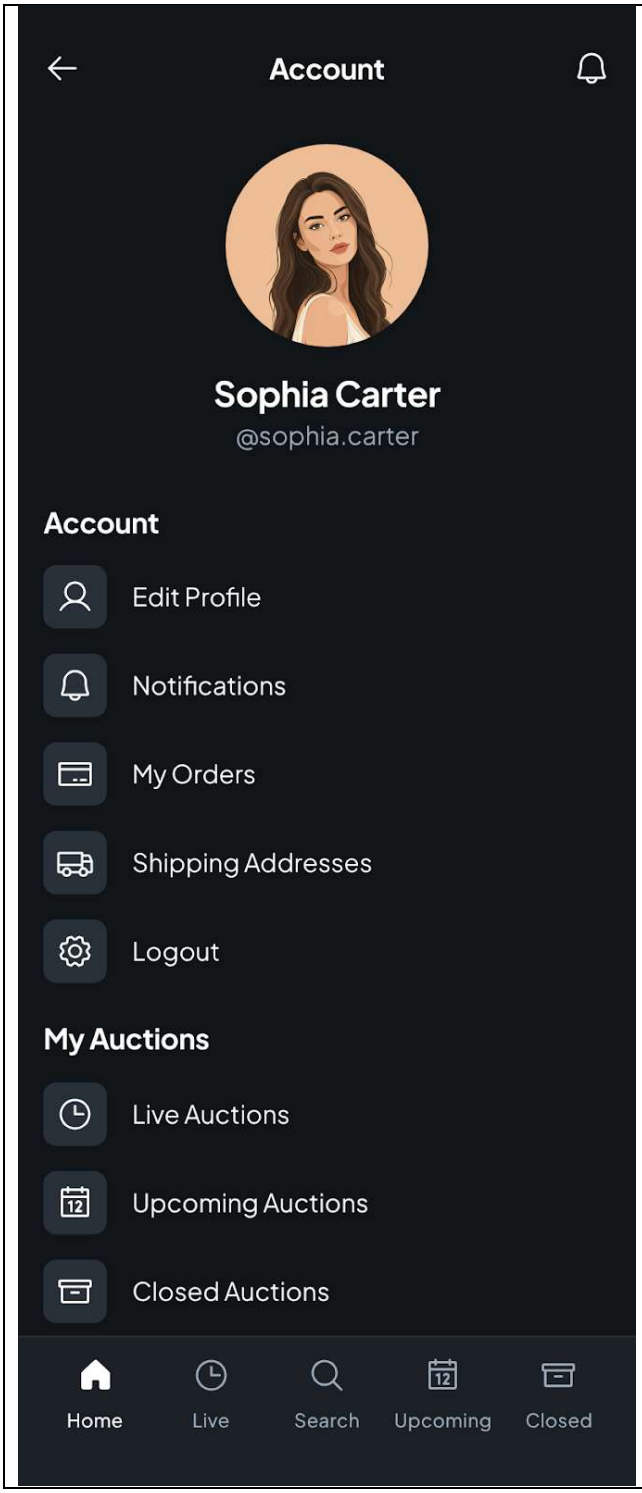
- Home Screen Always have top menu
- Based on the site settings, if enabled, will display the featured, New, Trending, and High Value auctions maximum of 4 items each.
- Notification icon should hav a dot with number that shows no of unread notifications
-



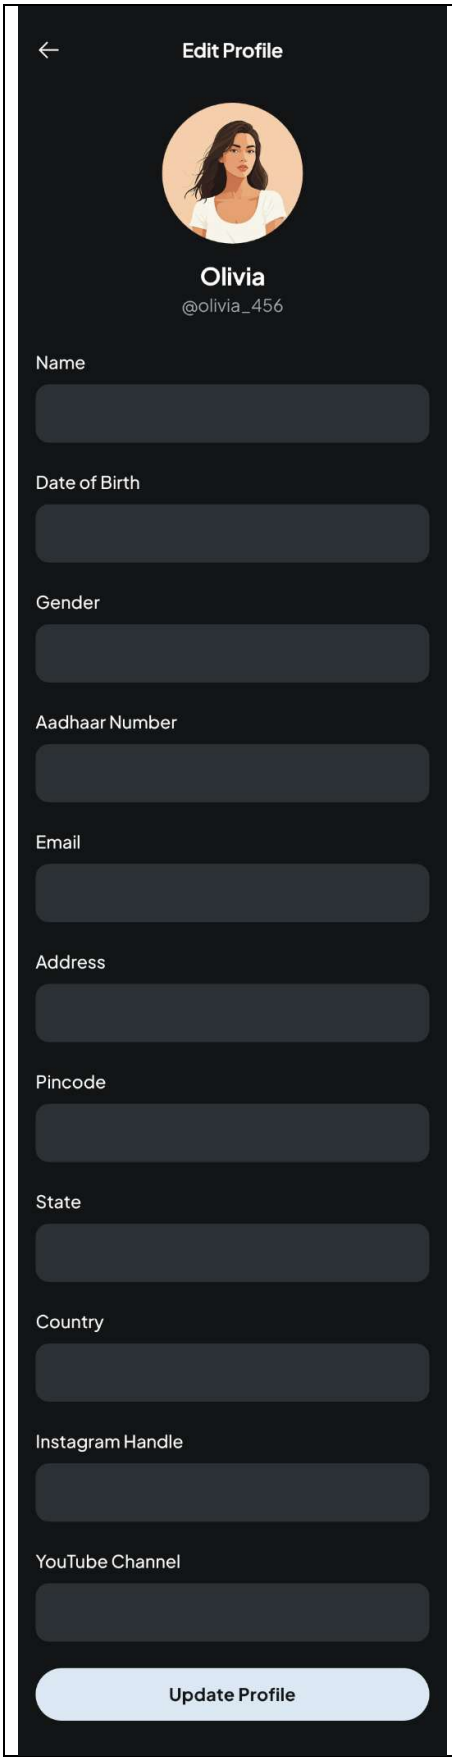
- If there are more categories, list only parent categories.
- Mainly meant for searching auctions.



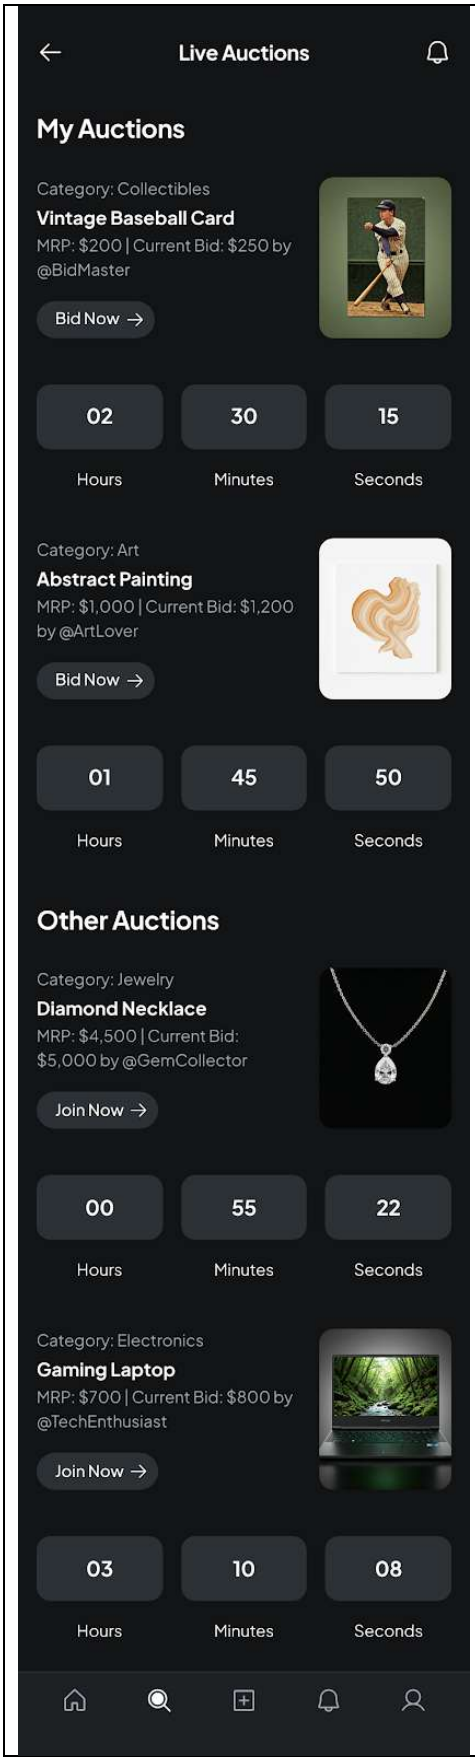
- Contact us should be About US.
- Contact us (About US) and Feedback page leads to the same screen, which will be used to generate the tickets
- Help Center should be leading to a screen of FAQ, (I will provide these Q and As)
- Terms Of Service and Privacy Policy should be standard templates with Company name “Xenford Internet Private Limited” and Product name “BidSquare”.
- Please keep the place holder if not clear so I will provide the draft.



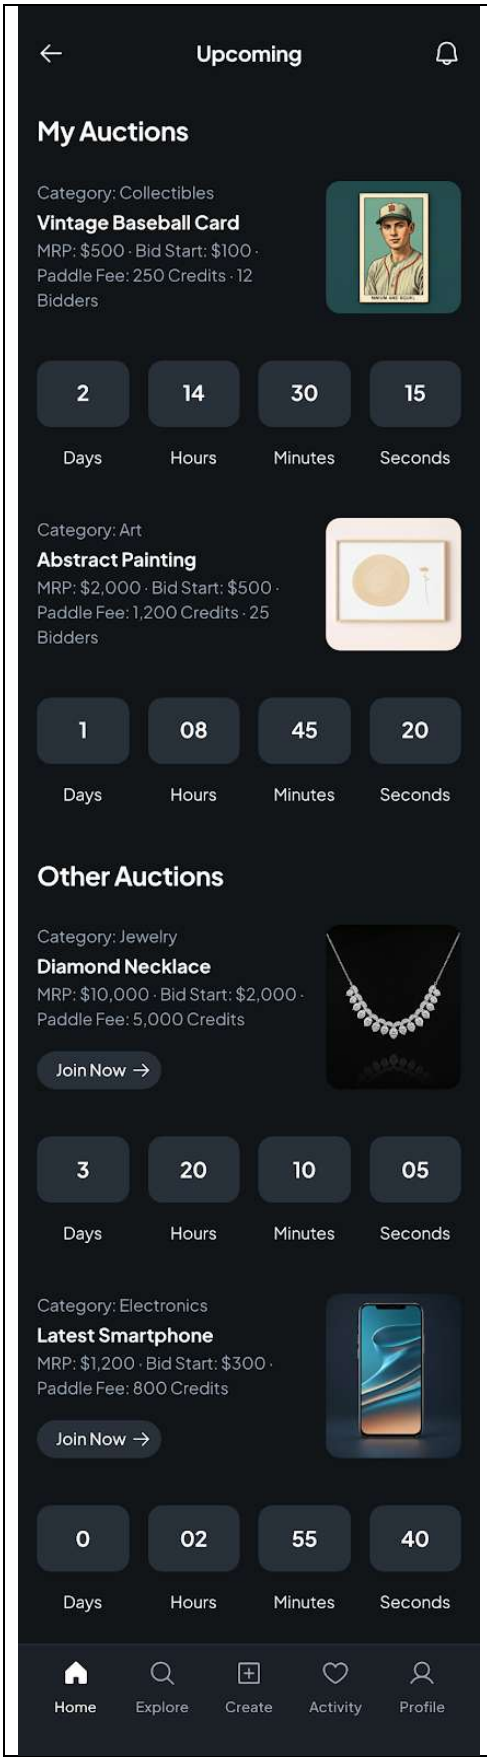
- Image is self explanatory of the requirements.



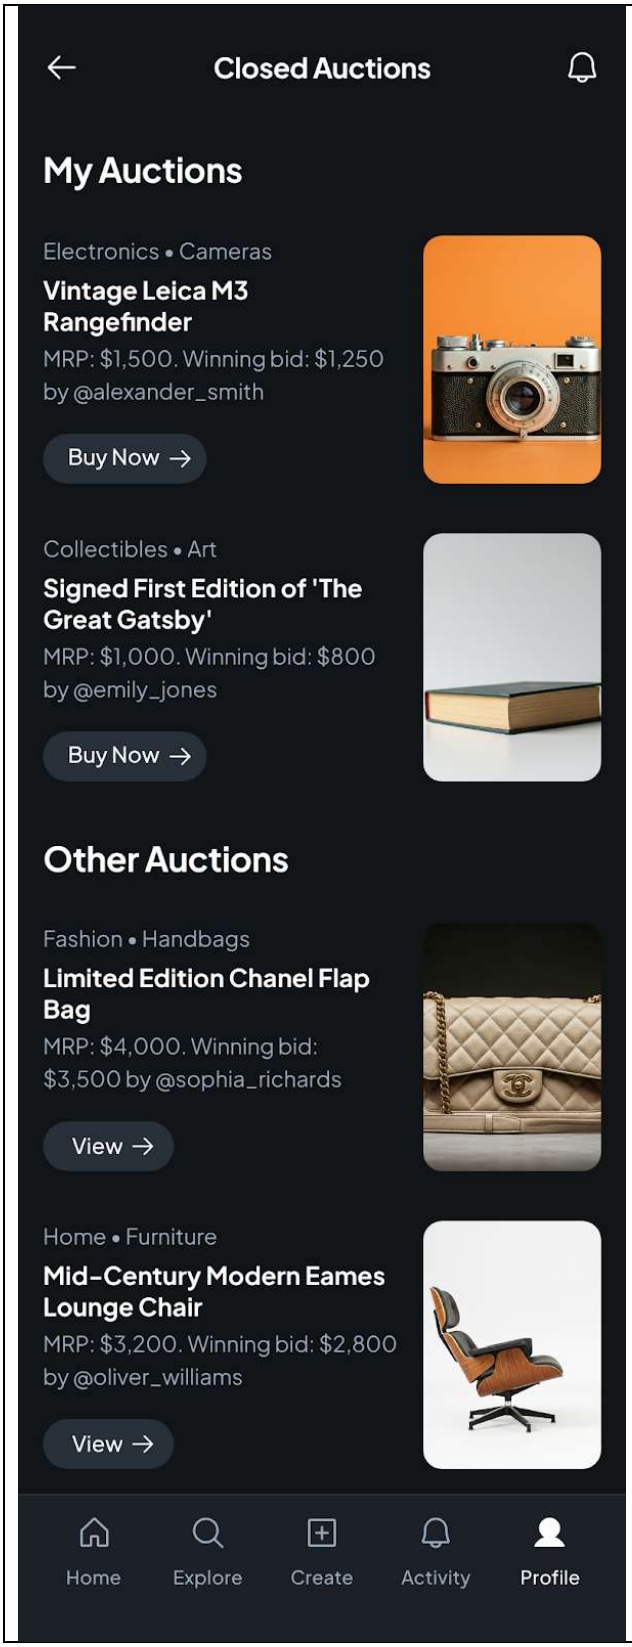
- Edit profile should display all details, while allowing the possible editable items to modify.



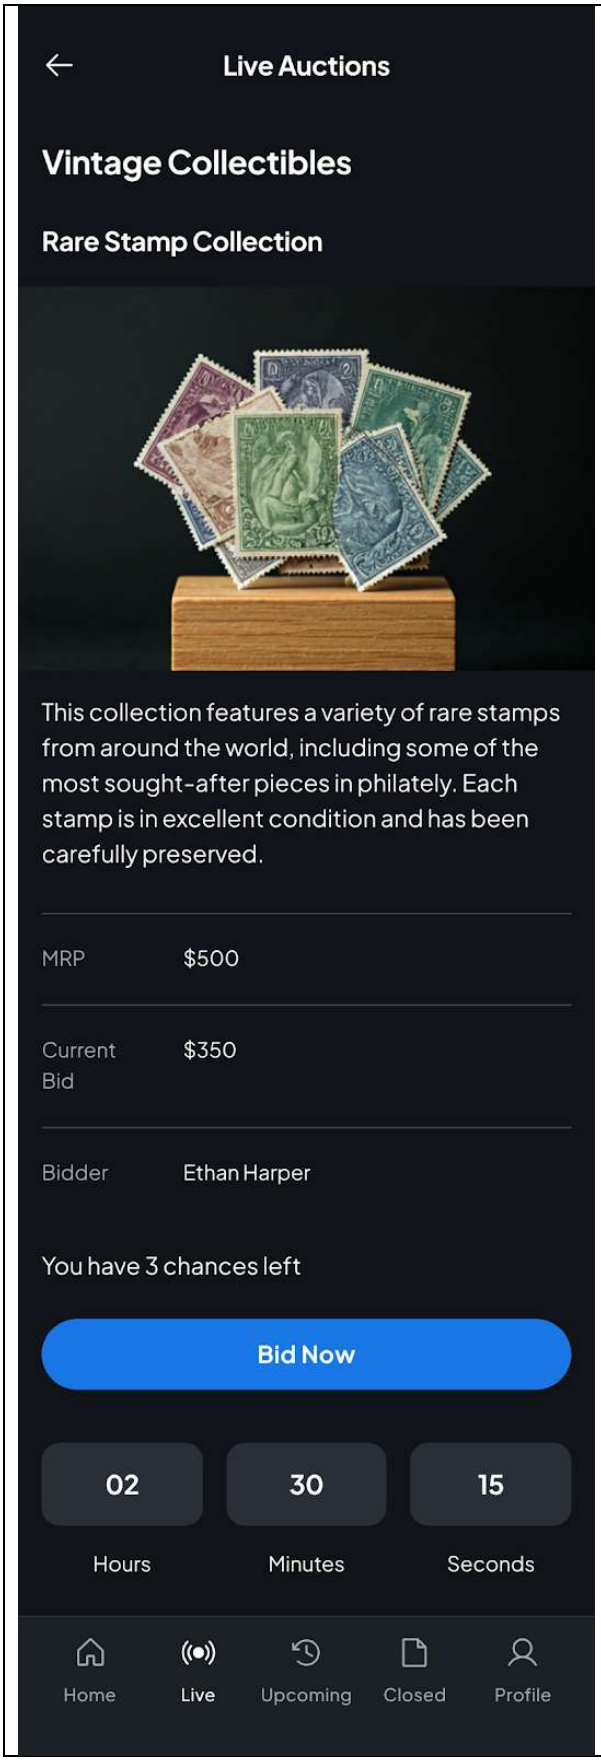
- The timer should have Minutes, Seconds and Micro Seconds (/100)
- Allow Minutes to be more than 60



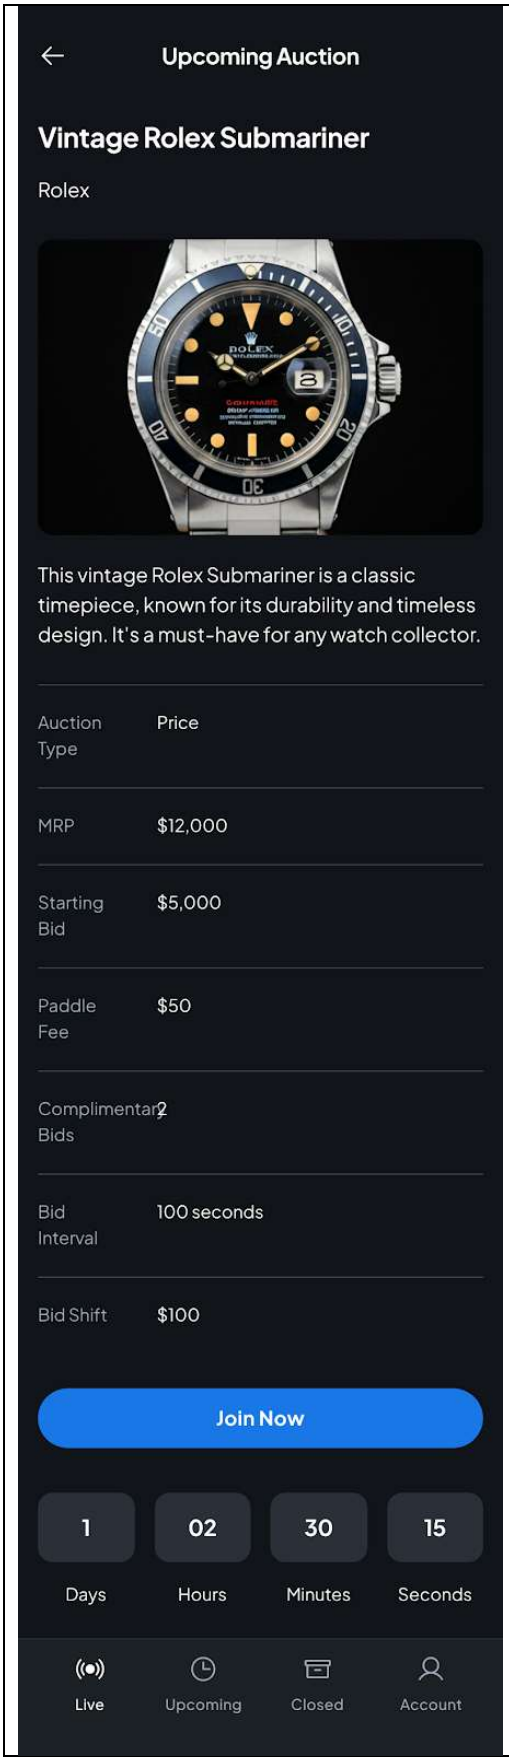
- Allow Vertical Scrolling
- Allow Multi page navigation if necessary



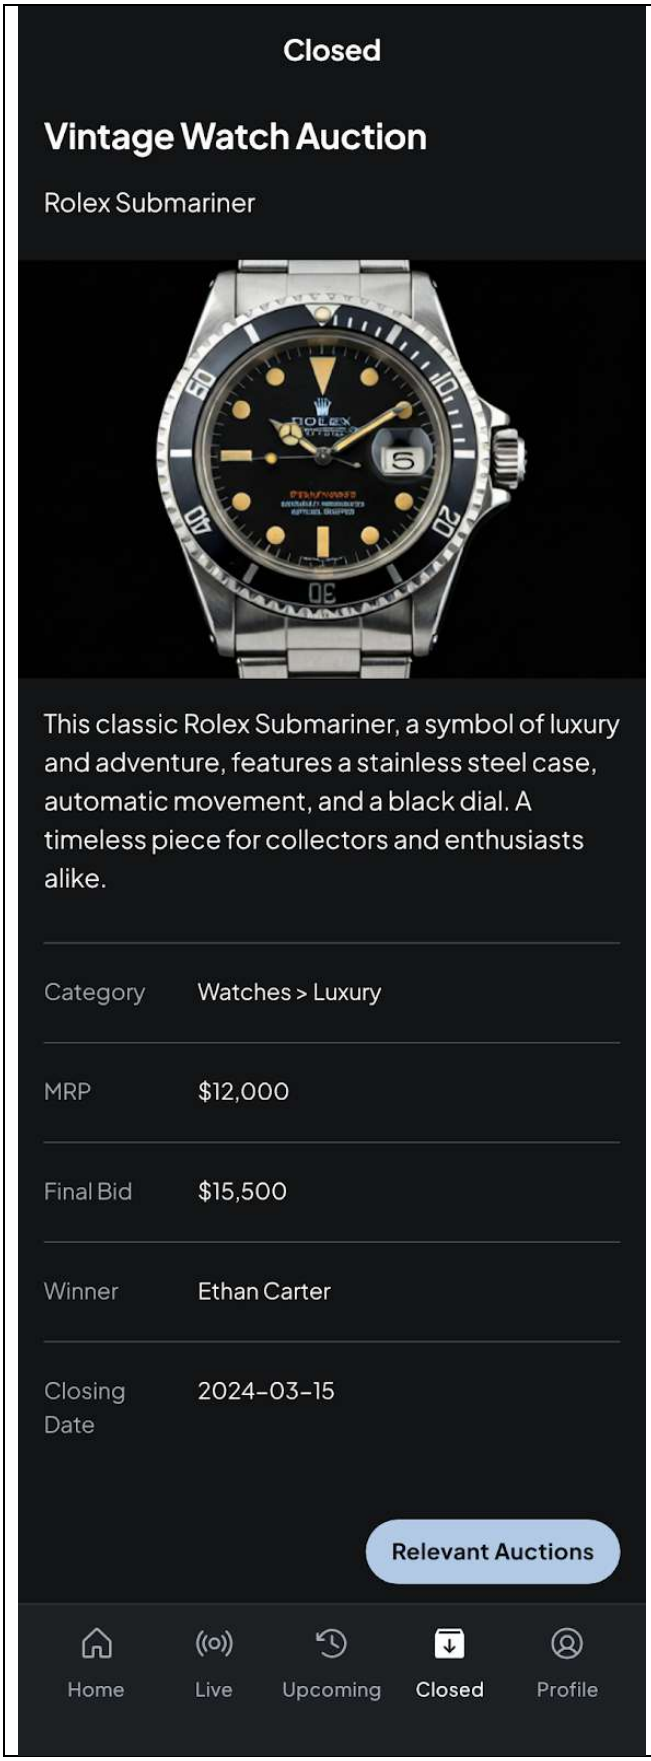
- Follow Consistent structure in displaying the auction details for all live, upcoming and closed.



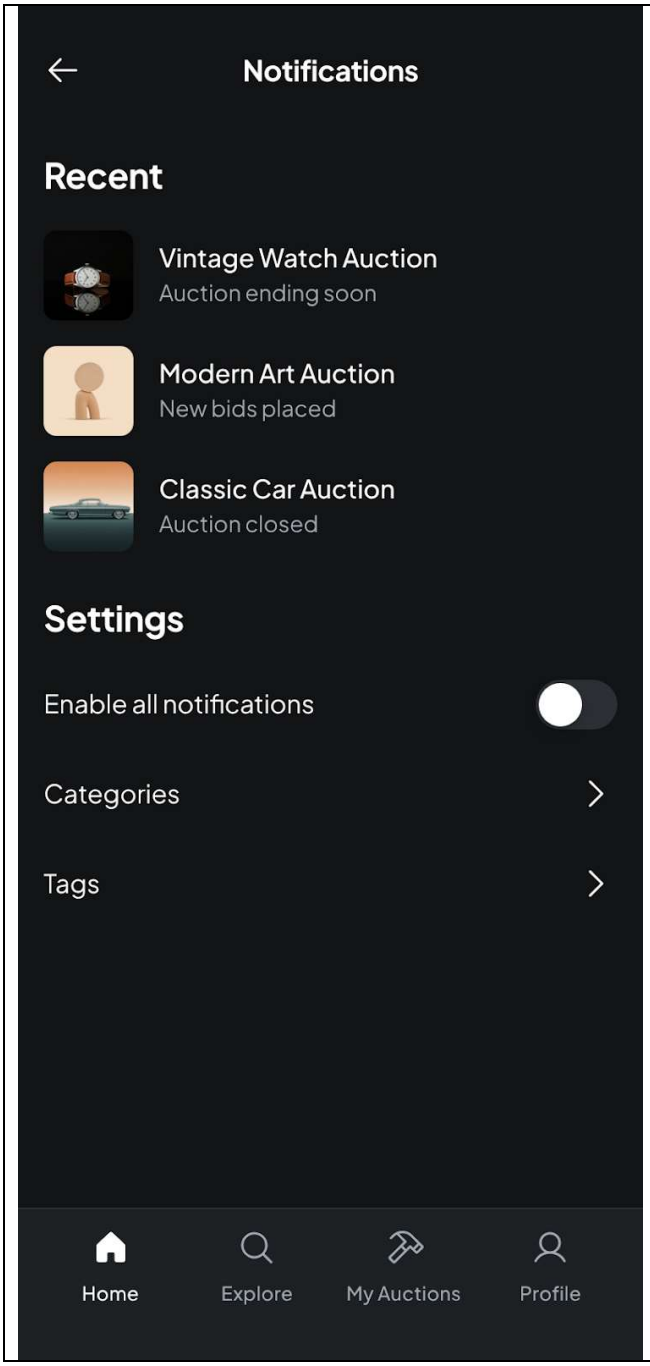
- Live Auction item details



- Upcoming auction item detail



- Closed auction item detail
- Ignore the relevant auctions button



- Display all unread notifications
- Enable disable notifications setting
